SUMMARY

Computational Biologist & AI Model Developer PhD Candidate specializing in **Deep Learning, GNNs**, and **Transformer architectures** to decode complex gene regulation. Expert in designing scalable analytical frameworks for **multimodal** data. Published in top computational biology conferences and journals.

EDUCATION

Brown University - Data Science Institute

PhD Candidate in Computational Biology

Thesis: *Gene Regulation using Integrative Multimodal Modeling with Graph Neural Networks*

Providence, RI

expected May 2027

GPA: 4.00

University of Rochester

BS in Computational Biology - Honors in Research

Minor in Computer Science

Rochester, NY

May 2022

GPA: 3.97

TECHNICAL SKILLS

- **ML/AI & GenAI:** PyTorch, PyTorch-Geometrics, Transformers, Numpy, LLMs (Gemini/OpenAI), RAG, Agentic Workflows, LoRA, Optuna, Hugging Face, GNNExplainer, SHAP, CUDA
- **Tools & Databases:** Enformer, Borzoi, Geneformer, scGPT, scFoundation, Loki, Nicheformer, Scanpy, SCENIC+, SCENIC, Seurat, LINGER, GRNBoost2, Git, Linux, Docker, SLURM, Upstash Vector, FastAPI/Node.js

RESEARCH EXPERIENCE

MERCK

AI/ML Modeling Intern

Cambridge, MA

May - present

- Developing fast causal discovery algorithms to scale up single-cell gene network analysis up to **3000 times** faster, outperforming state-of-the-art inferences by **20-30%**.
- Developing **agentic AI** to automate preprocess data, analyze, and generate hypotheses from inferred causality through collection of open-sourced literature or known gene-gene interactions.

Brown University

Research Projects – Deep Learning & Single-Cell Genomics

Providence, RI

Sep 2022 - present

- Developed **DRIFT**, a robust graph diffusion-based smoothing method to leverage **single-cell foundation models** (Geneformer, scGPT, scFoundation, Loki, Nicheformer) for **spatial transcriptomic data** with **zero-shot learning**; outperforming state-of-the-art specialized methods in cell type annotation (**+20%**), spatial alignment (**+30%**), and clustering performance (**+20%**). **LoRA finetuning** with **reconstruction loss** increases performance by **up to 10%**. *Accepted to ISMB as a Proceeding.*
- Developing **BindGPS**, a **Graph Neural Network model** that combines signals from **Micro-C and ChIP-Seq** to predict binding sites of dosage compensation complexes, with AUROC of over 0.88 and AUPR of 0.96. Deploying **CNNs** and **Transformers** to predict **TF perturbation** and applying **GNNExplainer** with **ablation techniques** to show the importance of 3D contacts and DNA sequences. *Manuscript in prep.*
- Developed **GRIDOT**, a graph neural network framework for **single-cell multi-omic gene regulatory inference**; integrated multi-omic data with **manifold alignment** to identify TF regulatory networks across diverse modalities, **outperforming** leading methods by **20%**. *Manuscript in prep.*
- Deployed **neural networks** and **optimal transport** to model gene regulation of different odor-associated learning environments from lab mice using scRNA-seq with over 95% accuracy; employed **SHAP, gene perturbation, and temporal ablation** to extract important genes for learning and memory. Findings predict candidate targets in PTSD-related circuits. *Manuscript in prep.*
- **Integrated scRNA-seq and ATAC-seq** data to **predict key regulatory TFs** of synaptic genes during fruit fly development - predictions were **experimentally validated** (BioRxiv preprint).
- Inferred gene trajectories of 10,000 genes in the piriform cortex during mouse neuronal differentiation by developmental **trajectory modeling for scRNA-seq** (results published in **Nature Neuroscience**).
- **Mentored** four undergraduates for their independent projects, leading to **two conference posters** and **three manuscripts**. Mentees were accepted to **top graduate programs**, including Harvard, Yale, Johns Hopkins, and the Tri-Institutional Program.

LEADERSHIP/SERVICE

Harvard University

Boston, MA

Research Mentor

Summer 2025

- Partnered with Harvard OpenBio to deliver COVID-focused research training for promising high school students; awarded **2nd Prize** for original research, resulting in a peer-reviewed publication. Mentee accepted to **top colleges**, including Columbia, UPenn, Cornell, and Johns Hopkins.

Brown University

Providence, RI

International Student Mentor

2023-2025

- Mentored over **60** international graduate students in accessing academic and community resources, promoting a smooth transition to campus life.

Rochester Alpha Phi Omega (National Co-ed Service Fraternity)

Rochester, NY

Vice President of Service

2020-2022

- Coordinated **1,200+ hours** of service for **60+ members** in partnership with **40+ Greater Rochester-based nonprofits**, including Habitat for Humanity, Army Reserves, and Golisano Children's Hospital.
- Raised over **\$2,500** for local nonprofits, including Make-A-Wish and House of Mercy, driving increased donor participation and expanded community outreach.

AWARDS AND HONORS

- ISMB Travel Award 2026
- T32 NIH ICoN Fellowship 2025-2027
- Phi Beta Kappa (inducted as a Junior)
- Dean's Scholarship Recipient 2018-2022
- Grace McCormack Memorial Award 2022
- Student Employee of the Year Nominee 2021
- Rigby Wile Prize Award 2019
- First Prize in Biomedical Data Science Hackathon Fall 2020 and 2021 (Undergraduate Division)
